RE: Directive 2002/95/EC (RoHS) Compliance

Dear Valued Customer,

In 2003, the European Union enacted environmental legislation restricting the use of certain substances in electrical and electronic products starting in July 2006. Many other countries are now adopting this or similar initiatives. Identco has been preparing for these initiatives and deadlines since early 2004 and are 100% RoHS Compliant. I have confirmed with our suppliers of materials that Identco produces labels with that these products are well below the threshold limits for the following;

Lead
Mercury
Cadmium
Hexavalent Chromium
Polybrominated Biphenyls
Polybrominated Diphenyl Ethers

These materials are not intentionally used in the manufacture of our products and there should be no incidental contamination during it's manufacture. Therefore we consider these products Directive 2002/95/EC (RoHS) complaint. The information contained herein is based on data considered accurate and is offered at no charge. Identco does not test these materials but relies on information from our material suppliers.

Sincerely,

Rick Brizek
Quality Manager
Identco International
